

“I just entered data in DATIM but I can’t see it!?”

DATIM continuously runs a script to propagate data entered in the “Data Entry App” to the other applications (for users with the proper privileges to then access that data.) This script is called the analytics table generation and it runs roughly every 20-30 minutes. *There is a time period between 12:21am-1:31am UTC (7:21pm-8:31pm in DC; 7:21am-8:21am in Bangkok) when the script could take up to 45-60 minutes to run.*

Users can check to see when the analytics table has generated by following the steps below. This will let you know the script’s last run time and when a user should then be able to view recently entered data in the Deduplication App, Approvals Apps, and Pivot Tables App.
